Computing Systems and Networks - The Internet

Glossary of Key Words

Vocabulary	Definition
internet	A global system of interconnected networks that allow for sharing of information and communication.
network	Networks connect different devices together so that information can be shared.
router	A device that manages to flow of data between computer networks.
Web browser	A program used to view, navigate and interact with web pages.
Web page	Web pages contain information in the form of text, links to other web pages, images and videos.
website	A collection of inter-related web pages.
World wide web	The part of the internet that contains websites and web pages.

Web browsers allow us to find and interact with web pages on the world wide web.

Outcomes:

- describe how networks physically connect to other networks
- recognise how networked devices make up the internet
- outline how websites can be shared via the World Wide Web (WWW)
- describe how content can be added and accessed on the World Wide Web (WWW)
- recognise how the content of the WWW is created by people
- evaluate the consequences of unreliable content

The internet is a network of networks all over the world that allow us to communicate and share information.
